

PRIVACY INVADERS

11/3/2019 (Vision) I saw myself walking down a residential street with a robot that looked like a human being. The robot, who wore sunglasses, was able to determine if there were people inside the houses by simply looking at the outside of the houses. As we approached one particular house, the robot signaled that there were people inside. It started to walk in that direction. I tried to leave but the robot forced me to go with him.

On 5/23/20 I came across an article that confirmed this vision. It was called “Bionic Eyes are coming and they’ll make us superhuman” by Jess Vilvestre dated 11/13/16. The article said that a bionic eye could let us see the entire electromagnetic spectrum from radio to gamma waves – we would be able to see heat, identify types of gases by sight and even look through walls”. Amazing!

1/14/2020 (Dream) I dreamed that a robot gone rogue was attacking me and my family. I began binding and rebuking it in the name of Jesus and it stopped.

7/22/2019 (Vision) I saw a book titled “DIGITAL CLONING OF DNA”.

I had no idea what this meant but I found a YouTube video by Martin B. News called “Digital Cloning: The future of movies” (June 2, 2014) that explained the concept. Basically they can take an actor and photograph him from many different angles. Then they can create a “perfect digital puppet with all the pores and wrinkles the real person would have had”. The result is a perfect virtual human that can be inserted into any scene. And they can make the digital clone say or do anything on screen.

The video hypothesized that in the future actors wouldn’t actually need to act any more. They would just need to get digitized, keep a copy of their virtual digital clone on their home hard drive, and lease it to the studio since the movie maker can make the digital clone do whatever is required. But what really gave me pause was that the Department of Defense was funding these digital cloning projects to make military training videos. It occurred to me that any person could be digitally cloned (think Facebook selfies) and their clone could be manipulated to do or say anything on any video. And it would appear as if the real person did or said what was being depicted. And those watching the videos would be none the wiser. It seems that digital cloning in the wrong hands could be used for deception.

7/19/2019 (Word) I heard the Holy Spirit say “PRIVACY INVADERS”.

10/11/2018 (Dream) I dreamed that I was standing on my front porch and I saw a non-descript van at the bottom of the hill driving very slowly up the street towards me. I immediately had the thought that I was being watched. Instead of hiding, I ran towards the van. When it was a few feet away, I saw a camera on the outside of the van that pivoted in my direction. Then I noticed that there was no driver in the van. It was a driverless car. I approached the camera and bent it upwards so it could no longer look at me.

One interesting note is that the van was not a newer model as you might expect but an older one. I found this intriguing so I researched if it was even possible to put newer technology into older cars and sure enough it is possible. I found an article called "Ghost wants to retrofit your car so it can drive itself on highways in 2020" by Kirsten Korosec posted on November 7, 2019 which confirms what I saw in the vision.

12/29/19 (Vision) I saw a swarm of flying insects hovering outside my living room window. I knew that they were drones disguised as insects.

8/11/19 (Vision) I saw myself applying mascara to my sister's eyelashes. I remember looking out the window and seeing 2 "sister" drones hovering outside. Somehow I knew that they were looking for me.

Apparently there are now fever-reading drones capable of taking a person's temperature from 300 feet in the air according to an article called "Fever Reading Drones just first of a wave of privacy challenges, civil liberties advocates say" on May 4, 2020 from msn.com. The technology can also take heart and respiratory rates, find people sneezing and coughing in crowds, and detect "infectious conditions from a distance of 190 feet".

4/9/19 (Dream) I dreamed that I was in a public building and told to sit in a chair attached to machine/computer. The computer asked me questions and recorded my responses and also took measurements of me. It moved me from station to station. At one station it shot a laser beam at my pelvis. Then the number "105" appeared on the computer screen as a result of the measurement. Then the computer asked me how much money I had on my person. End of Dream.

The above dream was confirmed on 4/23/2020 in an interview by Dr. June Knight with ex-Fema whistleblower, Celeste Solum, on watb.tv. At the 1:06:38 mark of the interview, Celeste mentioned an incident where she was scanned by an airport scanner a few years ago. The TSA agent asked her if she had any pain in her groin area. She replied no. When she looked at the scanner, the scan showed inflammation in the groin area. Apparently Celeste has a medical background and could easily identify it. A few hours later, she started having symptoms and realized she had a UTI. So the machine knew she was sick before she knew she was sick.

So not only are there airport scanners and drones that can potentially detect illness before a person even has symptoms but there is also a new biosensor in the works that when embedded in a person's skin, can also do this. In the article "A military-funded Biosensor could be the future of Pandemic Detection" it says this biosensor has 2 components – a tissue like hydrogel string that is injected under the skin and an electronic component attached to the outside of the skin. The hydrogel emits a signal outside the body when it begins to fight an infection. The electronic component is capable of sending that signal to a doctor or lab.

The scary part of all this is what happens to the body once the biosensor is placed in it. According Profusa's website, the biosensors "work fully integrated within the body's tissue, without any metal device or electronics, thereby overcoming the body's attempts to reject it. To date, the injected biosensors have functioned for as long as four years. Smaller than a grain of rice, each biosensor is a

flexible fiber about 5 mm long and half a millimeter wide, comprised of a porous scaffold that induces capillary and cellular ingrowth from surrounding tissue.” So it grows inside the body and becomes one with our cells and tissues. So our bodies would basically become one with AI. We would no longer fully human but part human and part machine. This sounds exactly like the mixing of iron with the seed of men described in Daniel 3:40-43.

Scriptures:

Matthew 18:18 Verily I say unto you, Whatsoever ye shall bind on earth shall be bound in heaven: and whatsoever ye shall loose on earth shall be loosed in heaven.

Isaiah 1:17 Learn to do good: Seek justice, Rebuke the oppressor, Defend the fatherless, Plead for the widow.

Daniel 3:40-43 And the fourth kingdom shall be strong as iron: forasmuch as iron breaketh in pieces and subdueth all things: and as iron that breaketh all these, shall it break in pieces and bruise. 41And whereas thou sawest the feet and toes, part of potters' clay, and part of iron, the kingdom shall be divided; but there shall be in it of the strength of the iron, forasmuch as thou sawest the iron mixed with miry clay. 42And as the toes of the feet were part of iron, and part of clay, so the kingdom shall be partly strong, and partly broken. 43And whereas thou sawest iron mixed with miry clay, they shall mingle themselves with the seed of men: but they shall not cleave one to another, even as iron is not mixed with clay.
