

The Case for the Booster Shots-Protection Waning!

McKana, September 17, 2021

Hosea 4:6 (KJV)

My people are destroyed for lack of knowledge: because thou hast rejected knowledge, I will also reject thee, that thou shalt be no priest to me: seeing thou hast forgotten the law of thy God, I will also forget thy children.

-----////////-----

We were told the VAX will protect, then came the breakthrough. The vaxed got infected. We are told the rate of infection of the vaxed is low, below 0.1%. The vaxed didn't only get infected but they breed the virus the same rate as the unvaxed and infect others. Then comes, the rate of infection of the vaxed is ~10% or so. Now, the surge is mounting, many infections and many deaths are reported. Doubts mounted and the latest news is the the protection form the VAX is waning building the case for the boosters. ***Is the world aware of the emergence of another deadly mutation from the new surge?*** God forbid, if this Delta brings another deadly mutation, which is very likely, the talk of a number of doses, booster shots and waning of protection will be long forgotten history save the next deadly pandemic.

For the sake of argument, in the field of developing a medicine, very exhaustive, time consuming and hundreds of millions worth of expenditure is invested to evaluate the effectiveness and its protective value. One of the most important aspect of these trails, next to the safety of the drug in question is the dose. What are the tolerable, protective bactericidal (bacterial, viral) doses required to do the job. In clinical trails, there is a proper dose for the effectiveness of the drug. Without the proper dose, under or overdoses leads to tolerance and risitance of the drug by the agents that cause the illness. It is not only the dose, the frequency and the timing of the use of the drug matters. Had it not been to these factors, Leprosy would have been eradicated long time ago. Due to the improper use of Dapsone, the first drug used to treat Leprosy, *Macro bacterium Lepre*, the mucosal bacterial agent that cause the disease developed tolerance and drug resistant bacteria emerged. The same with many disease causing agents.

Even with the basics of the science be it mutation, breakthrough and waning of the protective value of the jabs through time, what is not considered is the tolerance factor. Medical products without the proper use can be harmful and as well can be tolerated. If it doesn't work ones, if the second is in question, what makes anyone think the third will be effective? Waning of protection can be the same for the boosters too. These are for the sake of arguments. The story is different-The Time we are in is what matters most. There is the lack of knowledge of the time. These are not the ordinary times, it is **THE END OF TIMES!** Time itself is facilitated towards its end.

There shouldn't be any hesitation to lay down the fact that, science and its history doesn't know of nucleotides, specifically the most unstable mRNA to become a candidate for a vaccine. When it didn't work in the past, how can it work now? For the sake of laying the fact, when proprietary rights and secrecy of developing drugs is the norm, how come all companies work on the same mRNA vaccine at the same time? Who is behind this? when evil is in control and money the root of all evil is envolved, the value for human life and eternity is out of the picture.

Instead of scrambling on sideward issues, let us focus on what matters.

Until all Repent, repeating the same message again and again is of immense value. It is a matter of the forever.

The final word and the conclusion from the so many messages given from the Lord all this long are:-

1. The unvaccinated even if they die of the pandemic, as long as they remain in faith and repentance, the Lord will take care of them.
2. The unvaccinated, if they die without faith and repentance, let it be known that there is no

- redemption without faith and repentance.
3. The vaccinated, if they repent, they will save their soul, the Lord will forgive them. Their flesh will pay the price, they will get sick and eventually many will die. Depending, even their flesh can be healed with the mercy of the Lord.
 4. The vaccinated, from the word of the Lord **“Until they do, they repent not, they will perish.”** For the vaccinated, there is no remedy without repentance. Their flesh as well as their soul will perish/suffer death.

All the Data, Clinical data, Data analysis, the number of infections and the death of the vaccinated and unvaccinated, the concerns about data manipulations, accountability, waning of protection, single, double booster shots are the news/talks of the day. What matters most is the soul, the eternity and the forever destiny of all. **What matters most is where this jabbing is leading to, the inevitable, the short lived beast system and the One World Order.** Make a note, the world is running out of time through deception after deception, seeding fear and distractions.

Our concerns have to be, do you have your name written in the Lamb book of life? Are you saved? Are you redeemed? Are you covered by the blood of the Lamb? Do you, are you continuously repenting of your sins? These are what matters most, what should be the order of the day. The job of the saved is to **Preach Repentance** for all, specially for the jabbed.

By the time the boosters come, corona has already mutated to another uncertain ones. We have warned enough, one is enough to do the chaos, the pain, the suffering and the death. The enemy did this for controlling and running the world. The current surge with a single day death of 2,270 and 164,000 infection is an invitation to more mutation which makes can possibly make the boosters dead in arrival.(Corona data of September 15, 2021)

When the surge mounts, they might ask what options the people have. The answer is, the only option for all is Jesus, the everlasting.

Here is some news to make the **case for the booster** and Italy gone mandatory:-

Moderna says COVID-19 vaccine protection wanes, makes case for booster

“CHICAGO, Sept 15 (Reuters) - New data from Moderna Inc's (MRNA.O) large COVID-19 vaccine trial shows that **the protection it offers wanes over time, supporting the case for booster doses**, the company said in a news release on Wednesday.

"This is only one estimate, but we do believe this means as you look toward the fall and winter, at minimum we expect the estimated impact of waning immunity would be 600,000 additional cases of COVID-19," Moderna President Stephen Hoge said on a conference call with investors.

The data stands in stark contrast with data from several recent studies that suggested Moderna's vaccine protection lasts longer than a similar shot from Pfizer Inc (PFE.N) and German partner BioNTech SE .

Experts said the difference is likely due to Moderna's higher dose of messenger RNA (mRNA) and the slightly longer interval between the first and second shots.

Hoge said the vaccine's initial performance is strong, but argued that protection shouldn't be allowed to wane.

"The first six months are great, but you can't count on that being stable out to a year and beyond," he said.

Italy readies law to make COVID health pass mandatory for all workers

ROME, Sept 16 (Reuters) - Italy is poised to become the first country in Europe to make it obligatory for all workers to have a COVID-19 **"Green Pass"**, with the cabinet due to approve the measure at a meeting later on Thursday, officials said.

The pass is a digital or paper certificate showing someone has received at least one vaccine dose, tested negative or recently recovered from the disease.

It was originally conceived to ease travel among European Union states, but Prime Minister Mario Draghi's broad, unity government has rapidly extended its use in an effort to persuade more people to be inoculated and blunt the spread of the virus.

FDA's vaccine advisers meet to decide whether Americans need boosters.

Pfizer -- and other researchers -- say their studies show people develop strong immunity after two doses of vaccine, but **that levels of antibodies start to drop after a few months.**

"Concerns have been raised that **declining neutralizing antibody titers or reduced effectiveness against symptomatic disease may herald significant declines in effectiveness against severe disease,**" the FDA says in its briefing document.

The FDA notes that Pfizer's vaccine -- as well as vaccines made by Moderna and Johnson & Johnson -- still provide strong protection against severe disease, hospitalization and death, even if antibodies do wane over time. "Although unvaccinated individuals continue to account for most SARS-CoV-2 infections and severe cases of COVID-19, real-world **data suggest that rates of breakthrough infections may be on the rise** and that vaccine effectiveness may be waning over time."

The question will be whether it's time to start approving boosters now and if so, who should get them and when. The White House has said it's planning to be ready to start giving booster doses of vaccines September 20, pending signoff from the FDA and CDC.

The CDC has scheduled a meeting of its vaccine advisers for September 22 and 23 -- and CDC must give its stamp of approval for any booster doses to be officially given.
