

# NANOTECHNOLOGY

- ❖ Nanotech – It's everywhere now!
- ❖ One particle can hold 1TB of data
- ❖ Some have built-in AI
- ❖ Nanotech can modulate 100K per second
- ❖ Size – A nanometer is one billionth of a meter. A sheet of paper is about 100,000 nanometers thick.

Nano

## WHAT ARE SIT NANOTECH?

- SIT – Nano size, such as Smart Dust created by DARPA. Universal exposure, most people have multiple types.
- SIT – Complicated and not fully understood. Each category has its own specific functions. Overall, they provide a power supply, support, both defensive and offensive support to WPNPs and other SITs.
- SIT – They help make the customized attack against the body.

What they are putting in us is from the pit of hell! Dr Monzo @ SLC Redpill Expo

## WHAT ARE SIT NANOTECH?

- SIT/Nanotech – The most disturbing information!
- SIT – means “Satanic Information Technology”. This technology was not invented by man, by himself. Both WPNPs and SIT began with Project Paperclip – Nazi doctors and scientist that were consulting with fallen angels and/or demons/Nephilim then brought to America and other nations.
